# Anekant Education Society's TULJARAM CHATURCHAND COLLEGE

Of Arts, Science & Commerce, Baramati

Class :F.Y.B.Sc. (Computer Science)							
	Semester I	Semester II					
CSCO 1101	Basic Programming using C	CSCO 1201	Advanced Programming using C				
CSCO1102	DBMS-I	CSCO 1202	DBMS-II				
Practicals (Y	early)						
CSCO 1203	CSCO 1203 Lab Course I : Basics of C & Advanced C						
CSCO 1204	Lab Course II : DBMS I & II						

Class :S.Y.B.Sc. (Computer Science)							
	Semester I	Semester II					
CSCO 2101	Data Structures using C	CSCO 2201	Object Oriented Concepts using Java				
CSCO2102	Introduction to Web	CSCO2202	Software Engineering				
	Technology						
Practicals (Y	early)						
CSCO2203	CSCO2203 Lab Course I based On CSCO2101 & 2201						
CSCO2204	Lab Course II: based On CSCO2102 & CSCO2202 with Mini Project						

	Class :T.Y.B.Sc. (Computer Science)							
	Semester I	Semester II						
CSCO3101	System Programming & Operating System	CSCO3201	Computer Graphics					
CSCO 3102	Theoretical Computer Science	CSCO3202	Compiler Construction					
CSCO3103	Computer Networks	CSCO3203	Advanced Networks and Network Administrations					
CSCO3104	Internet Programming – I	CSCO3204	Internet Programming-II					
CSCO3105	Advanced Programming in Java	CSCO3205	Java Frameworks					
CSCO3106	Object Oriented Software Engineering	CSCO3206	Software Metrics & Project Management					
Practicals (Y	early)							
CSCO3207	CSCO3207 Lab Course I: Based on CSCO3101, CSCO3201& CSCO3203							
CSCO3208	CO3208 Lab Course II: Based on CSCO3105, CSCO3205 & Mini Project using JAVA							
CSCO3209	Lab Course III: Based on CSCO310	4, CSCO3204	& Mini Project using PHP.

#### SYLLABUS(CBCS) FOR F. Y. B. Sc. (Computer Science) (w.e.f from June, 2019) Academic Year 2019-2020

Class : F.Y. B. Sc.(Computer Science) (Semester- I)

Subject : Computer Science Paper Code : CSCO1101

Title of Paper: Basic Programming Using C Paper: I

Credit: 2

No. of lectures: 36

Learning Objectives : Students successfully completing this course will be able:

- 1. To understand and design algorithm for problem solving
- 2. To develop Problem Solving abilities using computers
- 3. To develop skills for writing programs using 'C'

Learning Outcome : Problem solving and programming capability.

Chapter	Topic Contents	No. of Lectures
Unit – I	Problem-Solving Using Computer         1.1 Problem Solving         1.2 Algorithms & Flowcharts         (More Problems covered )         1.3. Programming Languages         Machine language         Assembly language         High level languages	8
Unit – II	Introduction to C 2.1 History 2.2 Structure of a C program 2.3 Application Areas 2.4 C Program development life cycle 2.5 Sample programs	2
Unit – III	C Tokens 3.1 Keywords 3.2 Identifiers 3.3 Variables 3.4 Constants – character, integer, float, string, escape sequences 3.5 Data types – built-in and user defined 3.6 Operators and Expressions Operator types (arithmetic, relational, logical, assignment, bitwise, conditional, other operators), precedence and associatively rules.	5
Unit – IV	<ul> <li>Control Structures</li> <li>4.1 Decision making structures If, ifelse, switch</li> <li>4.2 Loop Control structures While, dowhile, for</li> <li>4.3 Nested structures</li> <li>4.4 break, continue and goto</li> </ul>	8

Unit – V	<ul> <li>Functions in C</li> <li>5.1 What is a function</li> <li>5.2 Advantages of Functions</li> <li>5.3 Standard library functions</li> <li>5.4 User defined functions :Declaration, definition, function call, parameter passing (by value), return keyword</li> <li>5.5 Scope of variables, storage classes</li> <li>5.6 Recursion</li> </ul>	8
Unit – VI	<ul> <li>Arrays</li> <li>6.1 Array declaration, initialization</li> <li>6.2 Types – one, two and multidimensional</li> <li>6.3 Passing arrays to functions</li> </ul>	5

Class : F.Y. B. Sc.(Computer Science) (Semester- I)

Subject : Computer Science Title of Paper: DBMS-I Paper Code: CSCO1102 Paper : II

Credit: 2

No. of lectures: 36

Learning objective :Students successfully completing this course will be able to:

- Understand design and implementation of a database system.
- Study the physical, logical database designs and database modeling.
- Understanding and development for essential DBMS concepts.
- Understand creations, manipulation and querying of data in databases.

#### Learning Outcomes:

- Master the basics of database concepts and database management system
- Model an application's data requirements using conceptual modeling tools like ER model, relational model.
- Write SQL commands to create tables, insert, update, delete and querying data.

Units	Title & Content	No. Of lecture
	1. Introduction to File organization & DBMS	
	1.1 Introduction	
	1.2 Types of file organization	
	1.3 File system Vs DBMS	
I Init I	1.4 Data models	04
Unit I	1.5 Levels of abstraction	04
	1.6 Data independence	
	1.7 Structure of DBMS	
	1.8 Users of DBMS	
	1.9 Advantages of DBMS	
	2.Conceptual Design (E-R model)	
	2.1 Overview of DB design	
	2.2 ER data model (entities, attributes, entity sets,	
Unit II	relations, relationship sets)	10
	2.3 Additional constraints (Key constraints, Mapping constraints),	
	2.4 Conceptual design using ER modelling	
	2.4 Case studies	
	3. Relational data model	
	3.1 Structure of Relational Databases (concepts of a table, a row, a	
Unit III	relation, a Tuple and a key in a relational database)	04
	3.2 Conversion of ER to Relational model	04
	3.3. Integrity constraints ( primary key, referential integrity,	
	unique constraint, Null constraint, Check constraint)	
	4. Relational algebra	
	4.1 Preliminaries	
Unit IV	4.2 Relational algebra (selection, projection set operations,	04
	renaming, joins, division)	
	4.3 Problems.	
	5. Introduction to SQL	
	5.1 Introduction	
	5.2 Basic structure	
Unit V	5.3 Set operations	08
	5.4 Aggregate functions	00
	5.5 Null values	
	5.6 PL/PgSqL: Data types, Language structure	

6	6. Operations with SQL	
6	o.1 Nested Subqueries	
6	5.2 Modifications to Database	
Unit VI 6	5.3 DDL and DML commands with examples	06
6	5.4 SQL mechanisms for joining relations (inner joins, outer joins	
a	nd their types)	
6	5.5 Examples on SQL (case studies )

Class: F.Y. B. Sc. (Computer Science) (Semester- II)Subject: Computer SciencePaper Code: CSCO1201Title of Paper: Advanced Programming using CPaper: ICredit: 2No. of lectures: 36

Learning Objectives: Students successfully completing this course will be able to:

- 1. Understand and design Programs through advanced C Concepts
- 2. Design graphics Programming.

Learning Outcome: Todevelopadvancedas well as Graphics programming capability.

Units	Topics Contents	No. of
<b>TT C</b>		Lectures
Unit - I	Pointers	
	1.2 Dereferencing pointers	
	1.2 Deleterencing pointers	
	1.3 Pointer artificient	
	1.4 Pointer to pointer	8
	1.5 Arrays and pointers	
	1.6 Functions and pointers – passing	
	pointers to functions, function	
	returning pointers	
	1.7 Dynamic memory allocation	
Unit – II	Strings	
	2.1 Declaration and initialization, format	
	specifiers	
	2.2 Standard library functions	6
	2.3 Strings and pointers	
	2.4 Array of strings	
	2.5 Command Line Arguments	
Unit – III	Structures and Unions	
	3.1 Creating structures	
	3.2 Accessing structure members (dot	
	Operator)	
	3.3 Structure initialization	
	3.4 Typedef	
	3.5 Array of structures	10
	3.6 Passing structures to functions	
	3.7 Nested structures	
	3.8 Pointers and structures	
	3.9 Self referential structure	
	3.10 Unions	
	3.11 Difference between structures and unions	
Unit – IV	File Handling	
	4.1 Streams	
	4.2 Types of Files	6
	4.3 Operations on files	
	4.4 Random access to files	
Unit – V	C Preprocessor	
	4.1 Format of Preprocessor directive	2
	4.2 File Inclusion directive	

4 a	.3 Macro substitution, nested macro, ugmented macro	
Unit – VI G 6 6	<ul> <li>Graphics programming using C</li> <li>5.1 Graphics driver and mode</li> <li>5.2 Drawing simple graphical objects – line, circle, rectangle etc.</li> <li>5.3 Outputting text, curves &amp; Polygons</li> </ul>	4

Class: F.Y. B. Sc.(Computer Science) (Semester- II)Subject: Computer SciencePaper Code : CSCO1202Title of Paper : DBMS-IIPaper : IICredit: 2No. of lectures: 36

**Prerequisites:** Knowledge of DBMS

Learning Objectives:-Students successfully completing this course will be able to:

- Understand fundamental concepts of RDBMS (PL/PgSQL)
- Understand data security and its importance
- Understand client server architecture

#### Learning Outcomes:

- Develop the database design by normalization.
- Knowing functional dependencies and design of the relational database.
- Design concept of Transaction and Query processing.

Unit	Title & Content	No. Of lecture			
	1. Relational Database Design				
	1.1 Preliminaries				
∐nit I	1.2 Normalization (1NF,2NF,3NF,BCNF,4NF, 5 NF)	12			
Omt I	1.3 Controlling the program flow, conditional statements, loops				
	1.4 Handling errors and exceptions, Cursors				
-	1.5 Views, Stored Functions, Stored Procedures, Triggers				
	2 Transaction Concepts and concurrency control				
	2.1 Transaction, properties of transaction, state of the transaction.				
	2.2 Executing transactions concurrently associated problem in				
	concurrent execution.				
	2.3 Schedules, types of schedules, Serializability, precedence				
	graph for Serializability.				
TT	2.4 Ensuring Serializability by locks, different lock modes, 2PL	10			
Unit II	and its variations.	10			
	2.5 Basic timestamp method for concurrency, Thomas write Rule.				
	2.0LOCKS with multiple granularity, dynamic database				
	2.7 Timestemps versus locking				
	2.8 Deadlock handling methods				
	2.8 1 Detection and Recovery (Wait for graph)				
	2.8.1 Detection and Recovery (Wait for graph).				
	3 Database Integrity and Security Concepts				
	3.1 Domain constraints				
	3.2 Referential Integrity				
	3.3 Introduction to database security concepts				
	3.4 Methods for database security				
Unit III	3.4.1Discretionary access control method	06			
	3.4.2Mandatory access control and role base access control				
	for multilevel security.				
	3.5 Use of views in security enforcement.				
	3.6 Overview of encryption technique for security.				
	3.7 Statistical database security.				
	4 Crash Recovery				
	4.1 Failure classification				
Unit IV	4.2 Recovery concepts	04			
	4.3 Log base recovery techniques (Deferred and Immediate	~ •			
	update)				

	<ul><li>4.4 Checkpoints</li><li>4.5 Recovery with concurrent transactions (Rollback, checkpoints,</li></ul>	
	commit) 4.6 Database backup and recovery from catastrophic failure.	
	<ul> <li>5. Client-Server Technology</li> <li>5.1 Describe client-server computing.</li> </ul>	
Unit V	<ul> <li>5.2 Evolution of Client - Server information systems.</li> <li>5.3 Client – Server Architecture benefits.</li> <li>5.4 Client Server Architecture - Components, Principles, Client</li> </ul>	04
	Components, Communication middleware components, Database middleware components, Client Server Databases

Class: F.Y. B. Sc.(Computer Science) (Annual)Subject: Computer SciencePaper Code: CSCO1203Title of Paper:Basic C & Advanced CPaper: III(Lab Course)Credit: 4No. of Practicals:10 /Semester

Learning Objectives: Students successfully completing this course will be able to:

- 1. Design and implement a 'C' programs for different problems
- 2. Understand appropriate use of language structure.
- 3. Understand use of appropriate Graphics Functions.

**Learning Outcome:** Problem solving and programming capability and develop Advanced as well as Graphics programming capability.

Semester I (Credits – 02) No. of Practicals – 10)				
	Title of Experiment/ Practical			
1	Assignment to demonstrate use of data types, simple operators & expressions.			
2	Assignment to demonstrate decision making statements (if and if-else, nested			
2	structures)			
3	Assignment to demonstrate decision making statements (switch - case)			
4	Assignment to demonstrate use of simple loops			
5	Assignment to demonstrate use of nested loops			
6	Assignment to demonstrate menu driven programs.			
7	Assignment to demonstrate writing C programs in modular way (use of user			
/	defined functions)			
8	Assignment to demonstrate recursive functions.			
9	Assignment to demonstrate use of arrays (1-d arrays ) and functions			
10	Assignment to demonstrate use of arrays (1-d arrays ) and functions			
	Semester II (Credits – 02) No. of Practicals – 10)			
	Title of Experiment/ Practical			
1	Assignment to demonstrate use of pointers.			
2	Assignment to demonstrate concept of strings (string & pointers)			
3	Assignment to demonstrate array of strings.			
4	Assignment to demonstrate use of bitwise operators.			
5	Assignment to demonstrate structures and unions.			
6	Assignment to demonstrate structures (using array and functions).			
7	Assignment to demonstrate command line arguments and preprocessor directives.			
8	Assignment to demonstrate file handling (text files & binary files)			
9	Assignment to demonstrate graphics programming.			
10	C Programming – Case study (Menu Driven Application Base) in Groups			

Class: F.Y. B. Sc.(Computer Science) (Annual)Subject: Computer SciencePaper Code : CSCO1204(Grade)Title of Paper: DBMS & RDBMSPaper: IV(Lab Course)Credit: GradeNo. of Practicals: 10 /Semester

Learning Objectives: Students successfully completing this course will be able to:

- Define & Manipulate the database Concepts.
- Understand SQL with DDL and DML Commands.
- Understand RDBMS concepts.

Learning Outcome: To know the DBMS& RDBMS Concepts and to operate Database Software.

Semester I No. of Practicals – 10				
Title of Experiment/ Practical				
1	Create simple tables, with only the primary key Constraint			
2	Create more than one table with integrity constraint			
3	Create more than one table, with referential integrity constraint.			
4	Drop a table from database, Alter the table.			
5	Insert/Update/Delete statements.			
б	Query for the tables using simple form of Select Statement			
7	Query solving for tableoperations(Aggregate function)			
8	Nested Query solving for tableoperations(Union, Intersect, Except)			
9	Nested Query solving for tableoperations(Set membership,			
	Cardinality, Comparison)			
10	To Small Case Studies.			
Semester II No. of Practicals – 10				
	Title of Experiment/ Practical			
1	Simple Queries			
2	Nested Queries			
3	Queries using aggregate functions			
4	Queries using Views			
5	Cursors			
6	Exception Handling			
7	Stored Function			
8	Triggers			
9	Case Study(1)			
10	Case Studies (2)

#### SYLLABUS (CBCS) FOR M.Sc. (Computer Science) (w.e.f from june 2019) Academic Year 2019-2020

Class: M.Sc. (Computer Science)(Semester-I) Title of paper: Principles of Programming Language Credit -4 Paper Code: **COMP4101** Paper: **I** No. of Lectures 48

### **Prerequisites:**

It is assumed that student learning this course have the following background:

- Experience with an OOP language (such as Java or C++)
- Experience with a procedural language (such as C)
- Working knowledge of C, C++, and Java programming.
- Basic algorithms and data structure concepts.
- Develop an in-depth understanding of functional, logic, and object-oriented programming paradigms

#### **Objectives:**

- This course will prepare you to think about programming languages analytically:
- Separate syntax from semantics
- Compare programming language designs
- Learn new languages more quickly
- Use standard vocabulary when discussing languages
- Understand basic language implementation techniques

#### • This course focuses on both:

- Theory is covered by the textbook readings, lectures, and on the tests
- Implementation is covered by the homework assignments

Unit	Title and Contents	Noof
Unit		
		lecture
	Introduction	2
Unit -I	✓ The Art of Language Design	
	✓ The Programming Language Spectrum	
	✓ Why Study Programming Languages?	
	✓ Compilation and Interpretation	
	✓ Programming Environments	
Unit-II	Non-Imperative Programming	10
	Models: Functional,Logic Languages	
	Common LISP	
	✓ Basic LISP Primitives (FIRST, REST, SETF, CONS, APPEND,	
	✓ LIST,NTHCDR,BUTLAST,LAST,LENGTH,REVERSE,ASSC)	
	✓ Procedure definition and binding, DEFUN, LET	
	$\checkmark$ Predicates and Conditional,	
	EQUAL, EQ, EQL, =, MEMBER, LISTP, ATOM, NUMBERP,	
	SYMBOLP, NIL, NULL, IF, WHEN, UNLESS, COND, CASE	
	✓ Procedure Abstraction and RecursionTurbo Prolog	
	✓ Introduction, facts, Objects and Predicates, Variables,	
	✓ Using Rules, Controlling execution fail and cut predicates.	
Unit-III	Names, Scopes, and Bindings	5
	$\checkmark$ The Notion of Binding Time	
	✓ Object Lifetime and Storage Management: Static Allocation,	
	Stack-Based Allocation, Heap-Based Allocation, Garbage	
	Collection	

	✓ Scope Pules	
	<ul> <li>Scope Rules</li> <li>Static Scoping, Nested Subroutines, Declaration Order, Dynamic</li> </ul>	
	• State Scoping, Nested Subroutines, Declaration Order, Dynamic	
	Scoping	
	<ul> <li>Ine meaning of Names in a Scope-Aliases, Overloading,</li> </ul>	
	Polymorphism and Related Concepts	
	✓ The Binding of Referencing Environments-Subroutine Closures,	
	First-Class Values and Unlimited Extent, Object Closures	
	✓ Macro Expansion	
Unit-IV	Data Types	8
	$\checkmark$ Introduction	-
	$\checkmark$ Primitive Data Types-Numeric Types Integer Floating point	
	Complex Decimal Boolean Types Character Types, Character	
	String Types, Decimal, Boolean Types, Character Types, Character	
	Length Operations, Evaluation, Implementation of Character	
	String Transa	
	String Types.	
	• User defined Ordinal types-Enumeration types, Designs,	
	Evaluation, Subrange types, Ada's design, Evaluation,	
	Implementation of user defined ordinal types	
	✓ Array types-Array initialization, Array operations, Rectangular	
	and Jagged arrays, Slices, Evaluation, Implementation of Array	
	Types	
	✓ Associative Arrays-Structure and operations, Implementing	
	associative arrays	
	✓ Record type-Definitions of records, References to record fields,	
	Operations on records, Evaluation, Implementation of Record	
	types	
	$\checkmark$ Union Types-Design issues. Discriminated versus Free unions.	
	Evaluation Implementation of Union types	
	$\checkmark$ Pointer and Reference Types-Design issues Pointer operations	
	Pointer problems Dangling pointers. Lost heap dynamic	
	voriables Dointers in C and C + Deference types Evaluation	
	Variables, Foliners III C and C++, Reference types, Evaluation,	
	Implementation of pointer and reference types, Representation of	
	pointers and references, Solution to dangling pointer problem,	
	Heap management	
Unit - V	Control Flow	5
	<ul> <li>Expression Evaluation-Precedence and Associativity,</li> </ul>	
	Assignments, Initialization, Ordering Within Expressions, Short-	
	Circuit Evaluation	
	✓ Structured and Unstructured Flow-Structured Alternatives to goto	
	Sequencing	
	✓ Selection-Short-Circuited Conditions, Case/Switch Statements	
	✓ Iteration-Enumeration-Controlled Loops, Combination, Loops,	
	Iterators, Logically Controlled Loops	
	✓ Recursion-Iteration and Recursion, Applicative and Normal -	
	Order Evaluation	
Unit -VI	Subroutines and Control Abstraction	5
	✓ Fundamentals of Subprograms	
	✓ Design Issues for subprograms	
	✓ Local Referencing Environments	
	✓ Parameter-Passing Methods	

	✓ Parameters That are Subprograms	
	✓ Overloaded Subprograms	
	✓ Generic Subroutines-Generic Functions in C++, Generic Methods	
	in Java	
	✓ Design Issues for Functions	
	✓ User-Defined Overloaded Operators	
	✓ Coroutines	
	✓ The General Semantics of Calls and Returns	
	✓ Implementing "Simple" Subprograms	
	<ul> <li>Implementing Subprograms with Stack-Dynamic Local</li> </ul>	
	✓ Variables	
	✓ Nested Subprograms	
	✓ Blocks	
	✓ Implementing Dynamic Scoping	
Unit-VII	Data Abstraction and Object Orientation	8
	✓ Object-Oriented Programming	
	✓ Encapsulation and Inheritance-Modules, Classes, Nesting (Inner	
	Classes), Type, Extensions, Extending without Inheritance	
	✓ Initialization and Finalization-Choosing a Constructor,	
	References and Values, Execution Order, Garbage Collection	
	✓ Dynamic Method Binding-Virtual- and Non-Virtual Methods,	
	Abstract, Classes, Member Lookup, Polymorphism, Object	
	Closures	
	✓ Multiple Inheritance-Semantic Ambiguities, Replicated	
	Inheritance, Shared Inheritance, Mix-In Inheritance	
Unit-VIII	Concurrency	5
	✓ Introduction-Multiprocessor Architecture, Categories of	_
	concurrency, Motivations for studying concurrency	
	✓ Introduction to Subprogram-level concurrency-Fundamental	
	concepts, Language Design for concurrency, Design Issues	
	✓ Semaphores-Introduction, Cooperation synchronization,	
	Competition Synchronization, Evaluation	
	✓ Monitors-Introduction, Cooperation synchronization,	
	Competition Synchronization, Evaluation	
	✓ Message Passing-Introduction, The concept of Synchronous	
	Message Passing	
	✓ Java Threads-The Thread class, Priorities, Competition	
	Synchronization, Cooperation Synchronization

Class: M.Sc. (Computer Science)(Semester-I) Title of paper: Cryptography and Network Security Credit -4 Paper Code: COMP4102 Paper: II No. of Lectures :50

# Learning Objectives:

- To enable students to get sound understanding of Info-Sys-Security, Network Security, Cryptography.
- To equip with knowledge and skills necessary to support for their career in Network Security.
- To develop attitude and interest along with necessary knowledge and skills among the students to encourage them to do further academic studies / research in this area, after the completion of their PG Course.

Chapters	Title & Contents	No. of
		Lectures
Unit – I	Introduction to Security:	
	The Need for Security, Security Approaches, Principles of	02
	Security, Types of Attacks	
Unit – II	Cryptography and techniques:	
	Introduction, Plain Text and Cipher Text, Substitution	
	Techniques, Transposition Techniques, Encryption and	06
	Decryption, Symmetric and Asymmetric key cryptography,	
	steganography.	
Unit – III	Symmetric Key Algorithms and AES:	
	Algorithm Types and Modes, Overview of Symmetric Key	06
	Cryptography, DES, IDEA, Blowfish	
Unit – IV	Asymmetric Key Algorithms, Digital Signature and RSA:	
	Brief History of Asymmetric Key Cryptography, overview,	06
	RSA Algorithm, Comparison between Symmetric &	00
	Asymmetric Key Algorithms, Digital Signature	
Unit – V	Digital Certificates and Public Key Infrastructure (PKI):	03
	Introduction, Digital Certificates, private key management,	03
Unit – VI	Internet Security Protocols: Basic Concepts, SSL, TLS,	
	SHTTP, TSP, SET, SSL v/s SET, 3-D Secure Protocol,	
	Electronic Money, Email Security, WAP Security, Users	
	Authentication and Kerberos: Authentication Basics, Password,	14
	Authentication Tokens, Certificate based Authentication,	
	Biometric Authentication, Kerberos, Security Handshake	
	pitfalls, SSO Approaches.	
Unit – VII	Network Security, Firewalls and Virtual Private Network	
	(VPN): Brief introduction to TCP/IP, Firewalls, IP Security,	05
	VPN, Intrusion	
Unit – VIII	Case studies on Cryptography and Security: Introduction,	
	Cryptographic solutions, Secure inter branch payment	08
	transaction, Denial of services(DOS) attacks, IP Spooling	

	Attack, Cross site scripting vulnerability(CSSV), Contract
	Signing, Secret Splitting, Virtual Electronics, Cookies and
	Privacy.

#### Class: M.Sc. (Computer Science)(Semester-I)

Title of paper: Database Technologies

Credit -4

Paper Code: COMP4103 Paper: III No. of Lectures 52

# Prerequisites:

Knowledge of RDBMS

#### <u>Course objectives :</u>

- 1. To study the usage and applications of Parallel and Distributed databases, Object relational database and emerging systems.
- 2. To acquire knowledge on NoSQL databases.

#### **Course outcomes :**

- 1. Compare different database technologies.
- 2. Compare and contrast NoSQL databases with RDBMS.

Chapters	Title & Contents	No. of Lectures
Unit – I	Parallel and Distributed Databases	
	1.1 Database System Architectures: Centralized and Client-Server	
	Architectures, Server System Architectures, Parallel Systems,	
	Distributed Systems	
	1.2 Parallel Databases : I/O Parallelism, Inter and Intra Query	10
	Parallelism, Inter and Intra operation Parallelism	10
	1.3 Distributed Database Concepts:	
	Distributed Data Storage, Distributed Transactions, Commit	
	Protocols, Concurrency Control, Distributed Query Processing,	
	Three Tier Client Server Architecture, Case Studies	
Unit – II	<b>Object and Object Relational Databases</b>	
	2.1 Concepts for Object Databases:	
	Object Identity, Object Structure, Type Constructors,	
	Encapsulation of Operators, Methods, Persistence, Type	
	and Class Hierarchies, Inheritance, Complex Objects,	10
	Object Database Standards	10
	2.2 Languages and Design : ODMG Model, ODL, OQL	
	2.3 Object Relational and Extended Relational Systems:	
	Object Relational features in SQL/Oracle	
	2.4 Case Studies	
Unit – III	XML Databases	
	3.1 XML Data Model	
	3.2 DTD	
	3.3 XML Schema	
	3.4 XML Querying	06
	3.5 Web Databases	
	3.6 Information Retrieval	
	3.7 Data Warehousing	
	3.8 Data Mining	
Unit – IV	Mobile Databases	
	4.1 Location and Handoff Management	10
	4.2 Effect on Mobility on Data Management	10
	4.3 Location Dependent Data Distribution	

	4.4 Mobile Transaction Models	
	4.5 Concurrency Control	
	4.6 Transaction Commit Protocols	
	4.7 Mobile Database Recovery Schemes	
	4.8 Examples: Oracle Database Lite, Microsoft SQL	
	Server Compact	
Unit – V	Introduction to NoSQL	
	5.1 Concepts and and evolution	
	5.2 History of NoSQL	
	5.3 Different NoSQL products : MongoDB, Couch DB,	
	Cassandra	00
	5.4 Exploring MongoDB	08
	5.5 Advantages of MongoDB over RDBMS	
	5.6 Interfacing and Interacting with NoSQL	
	5.7 Sharding	
	5.8 Replication	
Unit – VI	Working with NoSQL	
	6.1 NoSQL Storage Architecture	
	6.2 CRUD operations with MongoDB	
	6.3 Querying, Modifying and Managing NoSQL data stores	08
	6.4 Indexing and ordering datasets	08
	6.5 Surveying database internals	
	6.6 Migrating from RDBMS to NoSQL	
	6.7 Implementing NoSQL with PHP

Class:M.sc.(Computer science) (Semester-I)

Title of Paper:Design & Analysis of Algorithm

Credit:4

Paper Code:COMP4104

Paper: IV

No. of lectures:48

Learning Objectives: Student successfully completing this course will be able to

- Understand Basic Algorithm Analysis techniques and the use o- asymptotic notation
- Understand different design strategies
- Understand the use of data structures in improving algorithm performance
- Understand classical problem and solutions
- Learn a variety of useful algorithms
- Understand classification of problems

### **Learning Outcome**

- Basic algorithms and data structure concepts.
- Basic programming concepts

Class: M.sc. (Computer science) (Semester-I)

Title of Paper: Programming with DOTNET Credit:4 Paper Code:COMP4105 Paper: V No.of lectures:48

#### <u>Prerequisites –</u>

- Knowledge of object-oriented programming concepts such as data abstraction, encapsulation, inheritance, and polymorphism.
- Familiarity with programming language such as C++ and/or Java.
- Knowledge of web development

#### **Learning Objectives:**

Able to understand the DOTNET framework, C# language features and Web development using ASP.NET

#### **Learning Outcome:**

Ability to write the Visualized programming and design different real life problems.

	Part I : C#	
1.	Introduction to DOTNET Framework	2
	a. Introduction to DOTNET	
	b. DOT NET class framework	
	c. Common Language Runtime	
	i. Overview	
	ii. Elements of .NET application	
	iii. Memory Management	
	iv. Garbage Collector : Faster Memory allocation,	
	Optimizations	
	d. Common Language Integration	
	i. Common type system	
	ii. Reflection API	
	e. User and Program Interface	
2.	Introduction to C#	8
	a. Language features	
	i. Variables and Expressions, type conversion	
	ii. Flow Control	
	iii. Functions, Delegates	
	iv. Debugging and error handling, exception handling	
	(System Defined and User Defined)	
	b. Object Oriented Concepts	
	i. Defining classes, class members, Interfaces, properties	
	ii. Access modifiers, Implementation of class, interface	
	iii Concept of hiding base class methods. Overriding	
	iv Event Handling	
	c Collections Comparisons and Conversions	
	i Defining and using collections Indexers iterators	
	ii Type comparison Value Comparison	
	iii Overloading Conversion operators as operator	
	d. Generics	
	i. Using generics. ii. Defining Generics, generic Interfaces.	
	Generic methods. Generic Delegate	

3.	Window Programming	6
	a. Window Controls	
	i. Common Controls	
	ii. Container Controls	
	iii. Menus and Toolbars	
	iv. Printing	
	v. Dialogs	
	vi. Data tools	
	b. Deploying Window Application	
	i. Deployment Overview	
	ii. Adding setup project	
	iii. Building the project : Installation	
4	Data Handling	6
	a. File System Data	Ŭ
	b. XML Data	
	c. Databases and ADO NET	
5	Reporting Tools	4
	a Data Report	
	h Crystal Report	
6	Dot NFT Assemblies	3
0.	a Components	5
	h NET Assembly features	
	c Structure of Assemblies	
	d Calling assemblies private and shared assemblies	
	Dort II • A SD NET

Class: M.Sc.I (Computer Science) Semester-II Title of Paper : Digital Image Processing Credit : 04

Learning Objectives:

- To understand the relation between human visual system and machine perception and processing of digital images.
- To provide a detailed approach towards image processing applications like enhancement, segmentation, and compression.

#### Learning outcome:

- Review the fundamental concepts of a digital image processing system.
- Analyze images in the frequency domain using various transforms.
- Evaluate the techniques for image enhancement and image restoration.
- Interpret image segmentation and representation techniques

Unit No.	Contents	No. Of Lectures
1	Introduction to DIP	03
	<ul> <li>Introduction to Digital Image Processing</li> </ul>	
	• The origins of Digital Image Processing	
	• Examples of Fields that use Digital Image	
	Processing	
	Gamma-Ray Imaging	
	• X-Ray Imaging	
	• Imaging in the Ultraviolet Band	
	• Imaging in the Visible and Infrared Bands	
	<ul> <li>Imaging in the Microwave Band</li> </ul>	
	<ul> <li>Imaging in the Radio Band</li> </ul>

Class: M.Sc. (Computer Science )(Semester – II)Title of Paper : Data Mining and Data WarehousingCredit: 4

#### Prerequisites :

• Basic Knowledge of databases handling.

#### Learning Objectives :

- To study different data preprocessing techniques.
- To introduce the core concepts of data warehousing techniques and implementation.
- To introduce the core concepts of data mining techniques and applications.
- To study advanced data mining techniques.
- To use data mining software on various data sets by using proper algorithms.

#### **Learning Outcomes :**

- Students will understand both the theoretical and practical aspects data mining.
- Understand basic data mining algorithms, methods, and tools
- Understand data mining principles and techniques:
- Understanding the basic concepts of OLAP.
- Understanding the basic concepts of Data Warehouse.

Class	: M.Sc. (Computer Science )(Semester – II)	Paper Code :COMP4203
Title of Paper	: Python Programming	Paper: III
Credit	: 4	No. of Lectures : 48

### **Prerequisites:**

• To introduce various concepts of programming to the students using Python.

• Students should be able to apply the problem solving skills using Python Learning Objectives: Student successfully computing this course will be able to understand and gain the knowledge of the subject

Units	Title and Contents	No. of
		Lectures
Unit -I	Introduction to Python Scripting	
	• Why Scripting is Useful in Computational Science	
	Classification of Programming Languages	04
	Productive Pairs of Programming Languages	•••
	Gluing Existing Applications	
	• Scripting Yields Shorter Code, Efficiency	
	• Type-Specification (Declaration) of Variables	
	Flexible Function Interfaces	
	Interactive Computing	
	Creating Code at Run Time	
	Nested Heterogeneous Data Structures	
	GUI Programming	
	Mixed Language Programming	
	• When to Choose a Dynamically Typed Language	
	• Why Python? Script or Program?	
	Application of Python	
	• Concept (immutable)	
Unit -II	Basic Python	
·····	• Python identifiers and reserved words	06
	• Lines and indentation, multi-line statements	00
	• Comments	
	• Input/output with print and input functions,	
	• Command line arguments and processing command line	
	arguments	
	• Standard data types - basic, none, Boolean (true & False),	
	numbers	
	Python strings	
	• Data type conversion	
	• Python basic operators (Arithmetic, comparison,	
	assignment, bitwise logical)	
	• Python membership operators (in & not in)	
	• Python identity operators (is & is not)	
	Operator precedence	
	Control Statements, Python loops, Iterating by	
	• subsequence index, loop control statements (break,	
	continue, pass)	
	• Mathematical functions and constants (import math),	

	Random number functions	
Unit –	Python strings	
TTT	Concept, escape characters	06
	String special operations	
	• String formatting operator	
	• Single quotes, Double quotes, Triple quotes	
	• Raw String, Unicode strings, Built-in String methods.	
	• Python Lists - concept, creating and accessing elements.	
	updating & deleting lists, basic list operations, reverse	
	• Indexing, slicing and Matrices	
	• built-in List functions	
	• Functional programming tools - filter(), map(), and	
	reduce()	
	• Using Lists as stacks and Queues List comprehensions	
I nit -	Python tunles and sets

Class: M.Sc. (Computer Science)(Semester-II) Title of paper: Advanced Operating System Credit -4 PAPER CODE: COMP4204 PAPER –IV No. of Lectures 50

#### **Prerequisites:**

- Working knowledge of C programming.
- Basic Computer Architecture concepts.
- Basic algorithms and data structure concepts.

#### Learning Objectives:

Students successfully computing this course will be able to:

- Teaches Advanced Operating Systems Concepts using Unix/Linux and Windows as Representative examples.
- Strikes a delicate balance between theory (covered in TextBook-2,3) and practical applications (covered in TextBook-1, 4).
- In fact, most Units start with the theory and then switches focus on how the concepts are implemented in a C program.
- Describes the programming interface to the Unix/Linux system the system call interface.
- It is intended for anyone writing C programs that run under Unix/Linux.it concludes with an overview of Windows Threads Management.
- Finally it includes with an overview of Android Operating System.

#### **Learning Outcome:**

This course provides an understanding of the functions of Operating Systems. It also provides an insight into functional modules of Operating Systems.

Unit	Title and Contents	No. of
0		lectures
	Introduction to UNIX/Linux Kernel	03
Unit-1	• System Structure, User Perspective, Assumptions about Hardware,	
	Architecture of UNIX Operating System,	
	• Introduction to kernel, Types of kernel (monolithic, micro)	
	• Concepts of Linux Programming- Files and the Filesystem,	
	Processes, Users and Groups, Permissions, Signals, Interprocess	
	Communication.	
Unit-2	File and Directory I/O	13
	<ul> <li>Buffer headers, structure of the buffer pool, scenarios for retrieval of a buffer, reading and writing disk blocks, inodes, structure of regular file, open, read, write, lseek, close, pipes, dup ,creat, file sharing, atomic operations, dup2, sync, fsync, and fdatasync, fcntl, /dev/fd,stat, fstat, lstat, file types, Set-User-ID and Set-Group-ID, file access permissions, ownership of new files and directories, access function, umask function, chmod and fchmod, sticky bit, chown, fchown, and lchown, file size,file truncation, file systems, link, unlink, remove, and rename functions, symbolic links, symlink and readlink functions, file times, utime, mkdir and rmdir, reading directories, chdir, fchdir, and getcwd, device special files.</li> <li>Mapping Files into Memory, Advice for Normal File I/O, I/O Schedulers and I/O Performance, Directories, Copying and Moving files.</li> </ul>	

Unit-3	Process Environment, Process Control and Process Relationships	13
	• Process states and transitions, layout of system memory, the	
	context of a process, saving the context of a process, sleep, process	
	creation, signals, process termination, awaiting process termination,	
	invoking other programs, the user id of a process, changing the size	
	of the process, The Shell, Process Scheduling	
	• Process termination, environment list, memory layout of a C	
	program, shared libraries, environment variables, setimp and	
	longimp, getrlimit and setrlimit, process identifiers, fork, vfork, exit,	
	wait and waitpid, waitid, wait3 and wait4, race conditions, exec,	
	changing user IDs and group IDs, system function, user	
	identification, process times	
	• The Process ID, Running a New Process, Terminating a Process,	
	Waiting for Terminated Child Processes, Users and Groups,	
	Daemons, Process Scheduling, Yielding the Processor, Process	
	Priorities, Processor Affinity	
Unit 4	Memory Management	09
	• The Process Address Space, Allocating Dynamic Memory,	
	Managing Data Segment, Anonymous Memory Mappings,	
	Advanced Memory Allocation, Debugging Memory Allocations,	
	Stack-Based Allocations, Choosing a Memory Allocation	
	Mechanism, Manipulating Memory, Locking Memory,	
	Opportunistic Allocation, Swapping, Demand Paging.	
	• Disk Management- Disk Structure .Disk Scheduling algorithm.	
	Numerical exercise based on Disk algorithms. Disk management.	
	Swap Space concept and Management, RAID structure, Disk	
	performance issues	
Unit 5	Signal Handling	05
	• Signal concepts, signal function, unreliable signals, interrupted	
	system calls, SIGCLD semantics, reliable-signal technology,	
	kill and raise, alarm and pause, signal sets, sigprocmask, sigpending,	
	sigsetimp and siglongimp, sigsuspend, abort, system function	
	revisited, sleep	
	• Basic Signal Management, Sending a Signal, Signal Sets, Blocking	
	Signals, Advanced Signal Management, Sending a Signal with a	
	Payload.	
Unit 6	Windows Thread Management	03
	• Thread Internals	
	✓ Data Structures, Kernel Variables, Performance	
	Counters, Relevant Functions, Birth of a Thread	
	Examining Thread Activity : Limitations on Protected	
	Process Threads, Worker Factories (Thread Pools)	
	Thread Scheduling	
	✓ Overview of Windows Scheduling, Priority Levels,	
	Windows Scheduling APIs, Relevant Tools, Real-Time	
	Priorities, Thread States, Dispatcher Database,	
	Quantum, Scheduling Scenarios, Context Switching,	

Unit 7	Android Operating System	04
	• Architecture of the Android Operating System:-	
	$\checkmark$ The Android Software Stack. The Linux Kernel – its	
	functions essential hardware drivers Libraries -	
	Surface Manager Media framework SOLite WebKit	
	OpenGL Android Runtime - Dalvik Virtual Machine	
	Core Iava Libraries Application Framework - Activity	
	Manager Content Providers Telephony Manager	
	Location Manager, Resource Manager, Android	
	Application Activities and Activity Lifecycle	
	applications such as SMS client app. Dialer. Web	
	browser Contact manager	
	browser, Contact manager

Class: M.sc.(Computer science) (Semester-II) Paper Code:COMP4205 Title of Paper: Practical On Python Programming & AOS Paper: V (Lab Course) Credit:4 No of Practicals:12

Paper: V (Lab Course	e) Credit:4	No.of Practicals:12		
Python Assignments				
Assignment 1	Basic python programs			
Assignment 2	Strings			
Assignment 3	Tuples and sets			
Assignment 4	Dictionary			
Assignment 5	Functions			
Assignment 6	Files and Directories			
Assignment 7	Classes/objects			
Assignment 8	Exception Handling			
AOS Assignments				
Assignment 1	Process management			
Assignment 2	Memory Management			
Assignment 3	Signal Handling			
Assignment 4	Disk Scheduling			

Class: M.sc.(Computer science) (Semester-II) Title of Paper: Project Credit:4 Paper Code:COMP4206 Paper: VI (Lab Course) No.of Practicals:12

- The Project can be platform, language and technology independent.
- Project will be evaluated by the project guide.
- Assessment will be done weekly in the respective batch.
- Evaluation will be on the basis of weekly progress of project work, progress report, oral, results and documentation and demonstration.
- You should fill your status of project work on the progress report and get the signature of project guide regularly.
- Progress report should sharply focus how much time you have spent on specific task ? You should keep all sign progress report.
- Project will not be accepted, if progress report is not submitted and all the responsibilities remain with student.

The format of Progress Report is :

Roll No. & Name of Student:	
Title of the Project:	
Project Guide Name:	

Sr. No.	Date	Details of Project Work	Project Guide Sign (With Date)

Class: M.sc.(Computer science) (Semester-II) Paper Code:COMP4207				
Title of Paper: Artificial IntelligencePaper: VI I				
Credit:4 No.of lectures:48				
Learning Objectives: Student successfully completing this course will be able to				
•	Understand and gain the knowledge of the subject			
Learning O	utcome: Concepts of Data structures and Design and Analysis of alg	orithms		
Units	Title and Contents	No. of		
		Lectures		
Unit –I	Introduction			
	- What is Al			
	-Goals OI AI	8		
	-AI & Telated Helds			
	-Al technique			
	-Robot components (embodiment sensors states action brains			
	& brawn autonomy arms legs wheels tracks)			
	-languages use in robotics.			
	-latest trends (ASIMO.SOPHIA)			
Unit –II	Problem.Problem Spaces & Search			
	-state space search	6		
	-production system	Ū		
	-search & control strategies			
	-problem characterstics			
	-issues in the design of search program.			
Unit –III	Heuristics Search Techniques			
	-Heuristics search technique	8		
	-Generate and test algorithm			
	-Hill climbing(Simple hill climbing,Steepest hill			
	climbing, Simulated annealing)			
	-Best First Search(A* algorithm)			
	-Problem Reduction(AND-OR-Graphs,AO* algorithm)			
	-Constraint Satisfaction			
	-Mean-Ends Analysis			
	-Knowledge representation and mapping	0		
	-Approaches to knowledge representation	8		
	- Types of Kilowiedge Propositional Logic			
	-Predicate Logic			
	-CNF			
	-Resolution			
	-Forward & Backward chaining system			
Unit – V	Slot & Filler Structures	6		
	-Introduction			
	✓ Semantic network			
	✓ Inference in semantic net			
	✓ Partitioned semantic net			
	-Frames			

	-CD(conceptual dependency)	
	-Script	
	-CYC(CYC Motivation,CYCL)	
Unit – VI	Game Playing	6
	-Introduction	
	-Min-Max algorithm	
	-Adding alpha-beta cutoff	
	-Uncertainty Reasoning(Basic probability axioms, Baye's	
	rule, Certainty theory, Bayesian classification, Dempster-Shafer	
	Theory)	
Unit – VII	Learning	6
	-Introduction	
	-Rote learning	
	-Learning by Taking Advice	
	-Learning in problem solving(Learning by parameter	
adjustment.Learning by macro operators.Learning by chunking)		
	-Learning from Example-Induction	
	-Winston Learning Program(Version Spaces, Decision trees)	
	-Explanation Based Learning(EBL)(EBL Architecture,EBL	
	System Schematic)
