

Anekant Education Society's
Tuljaram Chaturchand College, Baramati
(Autonomous)

B.Sc. Degree Program in Computer Science
(Faculty of Science & Technology)

Syllabus

S.Y.B.Sc.(Computer Science) Semester -IV
For Department of Computer Science
Tuljaram Chaturchand College, Baramati

Choice Based Credit System Syllabus (2022 Pattern)
To be implemented from Academic Year 2022-2023

**Programs Outcome For B. Sc. (Computer Science)
(2022 Pattern)**

PO1: Apply fundamental principles and methods of Computer Science to a wide range of applications.

PO2: Design, correctly implement and document solutions to significant computational problems.

PO3: Impart an understanding of the basics of our discipline.

PO4: Prepare for continued professional development.

PO5: Understand the impact of the IT analyst solutions in societal and environmental contexts, and demonstrate the knowledge and need for sustainable development.

PO6: Develop proficiency in the practice of computing.

PO7: Develop the capacity to study and research independently that will help to develop skills for transition to employment in hardware/software companies

Course Structure for S.Y.B.Sc.(Computer Science) (2022 Pattern)

S. Y. B.Sc.(C.S.)

(2019 Pattern)		(2022 Pattern)	
Paper Code	Paper Title	Paper Code	Paper Title
CSCO 2101	Data Structure using C	UCSCO231	Data Structure using C
CSCO 2102	Introduction to Web Technology	UCSCO232	Introduction to Web Technology
CSCO 2103	Lab. Course I : based on UCSCO2101	UCSCO233	Lab. Course I : based on UCSCO231
CSCO 2104	Lab. Course II : based on UCSCO2102	UCSCO234	Lab. Course II : based on UCSCO232

Semester – III (2019 Pattern)			Semester – IV (2022 Pattern)		
Paper Code	Paper Title	Credits	Paper Code	Paper Title	Credits
CSCO2401	Object Oriented Concepts using Java	3	UCSCO241	Object Oriented Concepts using Java	3
CSCO2402	Software Engineering	3	UCSCO242	Software Engineering Principles and Techniques	3
CSCO2403	Lab Course I: Based On 2401	2	UCSCO243	Lab Course based on UCSCO241	2
CSCO2404	Lab Course II : Based On CSCO2402 with Mini Project	Grade	UCSCO244	Lab Course based on UCSCO242 with Mini Project	2

S.Y.B.Sc.(Computer Science)

Semester-IV

SYLLABUS (CBCS) FOR S. Y. B. Sc. (Computer Science) (Semester- IV)
(w.e.f from Academic Year 2023-2024)

Subject: Computer Science

Paper Code: UCSCO241

Title of Paper: Object Oriented Concepts using Java Paper: I

Credit: 3 (4 Lectures/Week)

No. of lectures: 45

Prerequisites:

- ✓ Knowledge of C Programming Language.
- ✓ Knowledge of CPP will be added benefit

Course Objectives:

1. To learn Object Oriented Programming language
2. To Read Input from users by different ways
3. To Define classes with different access modifiers
4. To handle complex problems using object-oriented concepts
5. To handle abnormal termination of a program using exception handling
6. To handle string using String & String Buffer Class
7. To understand file handling using java

Course Outcomes: On completion of the course, student will be able to

CO1: Understand Object Oriented Concepts

CO2: Read input from different ways.

CO3: Define class with different access modifiers and create object.

CO4: Write implement real world problems using Java

CO5: Handle exceptions during programs

CO6: Handle String efficiently

CO7: Handle file with different modes and formats

Unit	Title and Contents	No. of Lectures
1.	An Introduction to Java 1.1 A Short History of Java 1.2 Features or buzzwords of Java 1.3 Comparison of Java and C++ 1.4 Java Environment 1.5 Simple java program 1.6 Java Tools – jdb, javap, javadoc 1.7 Java IDE – Eclipse/NetBeans (Note: Only for Lab Demo.)	6
2.	An Overview of Java 2.1 Types of Comments 2.2 Data Types 2.3 Final Variable 2.4 Declaring 1D, 2D array 2.5 Accepting input using Command line argument	6

	2.6 Accepting input from console (Using Buffered Reader class)	
3.	Objects and Classes 3.1 Defining Your Own Classes 3.2 Access Specifiers (public, protected, private, default) 3.3 Array of Objects 3.4 Constructor, Overloading Constructors and use of ‘this’ Keyword 3.5 static block, static Fields and methods 3.6 Predefined class – Object class methods (equals (), toString(), hashCode(), get Class()) 3.7 Creating, Accessing and using Packages 3.8 Wrapper Classes 3.10 Garbage Collection (finalize () Method)	09
4.	Inheritance and Interface 4.1 Inheritance Basics (extends Keyword) and Types of Inheritance 4.2 Superclass, Subclass and use of Super Keyword 4.3 Method Overriding and runtime polymorphism 4.4 Use of final keyword related to method and class 4.5 Use of abstract class and abstract methods 4.6 Defining and Implementing Interfaces 4.7 Runtime polymorphism using interface 4.7 Object Cloning	09
5.	Exception Handling 5.1 Dealing Errors 5.2 Exception class, Checked and Unchecked exception 5.3 Catching exception and exception handling 5.4 Creating user defined exception 5.5 Assertions	6
6.	Strings, Streams and Files 6.1 String class and StringBuffer Class 6.2 Formatting string data using format () method 6.2 Using the File class 6.3 Stream classes Byte Stream classes Character Stream Classes 6.4 Creation of files 6.5 Reading/Writing characters and bytes 6.6 Handling primitive data types 6.7 Random Access files	09

Mapping of this course with Programme Outcomes

Course Outcomes	Programme Outcomes (POs)						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	3	3
CO2	2	3	3	2	2	2	3
CO3	2	3	3	2	2	2	2
CO4	3	3	3	2	2	2	3
CO5	3	3	3	2	2	2	3
CO6	2	3	3	2	2	2	3
CO7	3	3	3	2	2	2	3

1. PO1 with All COs

CO1: PO1:3 (Strongly related): as computer system simulation involves applying mathematical and computational fundamentals to understand and model IT systems.

CO2: PO1: 3 (Strongly related): as implementing assembly programs requires a deep understanding of computer fundamentals and mathematics.

CO3: PO1: 3 (Strongly related): as working with shell commands and system calls requires knowledge of computer fundamentals and IT applications.

CO4:PO1: 2(Strongly related): as CPU scheduling algorithms involve applying mathematical and computational principles to optimize system performance.

CO5: PO1: 2(Strongly related): as shell scripting and command-line interfaces are integral parts of IT applications, requiring computer knowledge.

CO6: PO1: 3 (Strongly related): as implementing the Banker's algorithm involves applying mathematical and computational concepts to address system deadlock issues.

CO7: PO1: 3 (Strongly related): as troubleshooting in these areas requires applying computer knowledge and problem-solving skills.

2. PO2 with All COs

CO1: PO2:2 (Strongly related): as understanding computer system simulation is foundational to designing and developing solutions in various IT contexts.

CO2: PO2: 3 (Strongly related): as the ability to implement assembly programs is a key aspect of designing and developing solutions at a low level.

CO3: PO2: 3 (Strongly related): as familiarity with shell commands and system calls is essential for designing and developing solutions involving command-line interfaces.

CO4: PO2: 2(Strongly related): as knowledge of CPU scheduling algorithms is crucial for designing efficient and optimized system solutions.

CO5: PO2: 2(Strongly related): as proficiency in shell scripting and command-line interfaces is valuable in designing and developing practical solutions.

CO6: PO2: 2(Strongly related): as implementing the Banker's algorithm is a specific design solution for deadlock avoidance in system development.

CO7: PO2: 3 (Strongly related): as troubleshooting skills are essential for the ongoing development and maintenance of solutions.

3. PO3 with All COs

CO1: PO3: 3 (Strongly related): as simulation tools are modern tools extensively used for understanding and modeling complex computer systems.

CO2: PO3: 3(Strongly related) as modern tools for assembly programming are essential for efficient and error-free implementation.

CO3: PO3: 3 (Strongly related): as proficiency in using modern command-line tools is crucial for effective utilization of shell commands and system calls.

CO4: PO3: 3(Strongly related): as modern tools are employed to simulate and analyze the performance of various CPU scheduling algorithms.

CO5: PO3: 3 (Strongly related): as modern tools and editors are commonly used for efficient development and execution of shell scripts.

CO6: PO3: 3 (Strongly related): as the implementation and simulation of algorithms often involve the use of modern programming tools and environments.

CO7: PO3: 3 (Strongly related): as modern debugging and profiling tools are essential for effective troubleshooting in various areas of system development.

4. PO4 with All COs

CO1: PO4: 1(Partially related): as computer system simulation, is more aligned with technical aspects than direct environmental and sustainability considerations.

CO2: PO4: 1(Partially related): as assembly programming focuses on technical skills rather than direct implications for environmental and sustainability concerns.

CO3: PO4: 1(Partially related): as shell commands and system calls are more technical in nature and have limited direct connection to environmental and sustainability aspects.

CO4: PO4: 1 (Partially related): as CPU scheduling algorithms are primarily technical and do not have a strong direct link to environmental and sustainability considerations.

CO5: PO4: 1 (Partially related): as shell scripting and command-line interfaces are technical skills with limited direct impact on environmental and sustainability aspects.

CO6:PO4: 1(Partially related): as the Banker's algorithm focuses on technical aspects of deadlock avoidance rather than environmental or sustainability implications.

CO7: PO4: 1 (Partially related): as troubleshooting skills are more aligned with technical problem-solving and have limited direct connection to environmental and sustainability concerns.

5. PO5 with All COs

CO1: PO5: 1 (Partially related): as computer system simulation is more aligned with technical aspects, and its connection to ethical principles is indirect.

CO2PO5: 1(Partially related): as assembly programming primarily focuses on technical skills rather than direct ethical considerations.

CO3: PO5: 1 (Partially related): as shell commands and system calls are technical in nature and have limited direct connection to ethical principles.

CO4: PO5: 1 (Partially related): as CPU scheduling algorithms are primarily technical and do not have a strong direct link to ethical considerations.

CO5: PO5: 1(Partially related): as shell scripting and command-line interfaces are technical skills with limited direct impact on ethical principles.

CO6: PO5: 2 (Moderately related): as the implementation of the Banker's algorithm may involve considerations related to ethical and responsible programming practices.

CO7: PO5: 2 (Moderately related) as troubleshooting involves ethical considerations, such as maintaining the integrity and security of systems.

6. PO6 with All COs

CO1: PO6: 2(Moderately related): as collaborative efforts may be involved in designing and interpreting simulations.

CO2: PO6: 2 (Moderately related): as teamwork may be required for collaborative coding, code reviews, or troubleshooting.

CO3: PO6: 2 (Moderately related): as working on command-line interfaces and scripting may involve collaboration and knowledge sharing within a team.

CO4: PO6: 2 (Moderately related): as understanding and implementing scheduling algorithms may require teamwork for analysis and optimization.

CO5: PO6: 2 (Moderately related): as collaboration and sharing of scripts within a team may be necessary for effective system management.

CO6: PO6: 2(Moderately related): as collaborative efforts may be needed to implement and test the Banker's algorithm in a simulated environment.

CO7: PO6: 3(Strongly related): as troubleshooting often involves collaboration and collective problem-solving within a team.

7. PO7 with All COs

CO1: PO7: 2 (Moderately related): as simulation skills may contribute to innovative problem-solving and employability in technical roles.

CO2: PO7: 2 (Moderately related): as assembly programming skills may enhance employability in technical fields and contribute to innovative solutions.

CO3: PO7: 2 (Moderately related): as proficiency in shell commands and system calls is valuable for employability and innovation in system administration and development.

CO4: PO7: 2 (Moderately related):as knowledge of CPU scheduling algorithms can contribute to innovative solutions and employability in system optimization roles.

CO5:PO7: 2 (Moderately related): as scripting skills are often sought after in IT roles, contributing to employability and potential innovation in automation.

CO6: PO7: 2 (Moderately related): as implementation of algorithms demonstrates technical competence relevant to employability and innovation.

CO7: PO7: 3 (Strongly related): as troubleshooting skills are critical for employability and can contribute to innovation by solving complex technical challenges.

SYLLABUS (CBCS) FOR S. Y. B. Sc. (Computer Science) (Semester- IV)
(w.e.f. from Academic Year 2023-2024)

Subject: Computer Science

Paper Code: UCSCO243

Title of Paper: Lab Course based on UCSCO241 **Paper:** III(Practical)

Credit: 2 (3 Hour Practical/Week/batch)

No. of Practical: 12

Prerequisites:

- ✓ Knowledge of C Programming Language.
- ✓ Knowledge of CPP will be added benefit

Objective:

1. To learn Object Oriented Programming language
2. To Read Input from users by different ways
3. To Define classes with different access modifiers
4. To handle complex problems using object-oriented concepts
5. To handle abnormal termination of a program using exception handling
6. To handle string using String &String Buffer Class
7. To understand file handling using java

Course Outcomes:On completion of the course, student will be able to

CO1.On completion of the course, student will be able toUnderstand Object Oriented Concepts

CO2.Understand the difference between Java & CPP

CO3. Read input from different ways.

CO4. Define class with different access modifiers and create object.

CO5.Write real world problems using Java

CO6. Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming.

CO7. Demonstrate the use of various OOPs concepts with the help of programs.

Sr. No	Assignment Name	No Of Hours
1	JavaTools	3
2	Arrayof Objects	3
3	Packages	3
4	Single Inheritance	3
5	Multilevel Inheritance	3
6	Interfaces	3
7	ExceptionHandlingandAssertions	3
8	Input Output	3
9	FileHandling	3
10	File Handling	3

References:

- 1) Complete reference Java by Herbert Schildt (5th edition)
- 2) Java 2 programming black books, Steven Horlzner
- 3) Programming with Java , A primer ,Forth edition , By E. Balagurusamy
- 4) Core Java Volume-I-Fundamentals, Eighth Edition, Cay S. Horstmann, Gary Cornell, Prentice Hall, Sun Microsystems Press

Mapping of this course with Programme Outcomes

Course Outcomes	Programme Outcomes (POs)						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	2	3	3	2	3	3
CO2	2	1	2	2	2	3	3
CO3	3	1	2	2	1	2	2
CO4	2	2	3	3	2	3	2
CO5	2	2	3	3	2	3	3
CO6	3	3	3	3	2	3	3
CO7	3	3	3	3	2	3	3

Mapping of PO1 With All CO's with Justification :

CO1: With PO1: Object-oriented concepts are foundational to programming languages and software development, contributing to the broader knowledge areas mentioned in PO1.

CO2: With PO1: Understanding the difference between Java and C++ is language-specific and may not directly contribute to the comprehensive knowledge enrichment across diverse IT domains listed in PO1.

CO3: With PO1: Reading input is a basic programming skill, but it may not directly align with the specified knowledge areas in PO1.

CO4: With PO1: Creating classes with access modifiers and instantiating objects are fundamental OOP concepts that contribute to understanding programming languages, though not as directly aligned with the diverse IT domains in PO1.

CO5: With PO1: Writing real-world problems in Java is specific to programming and contributes to knowledge in programming languages, but it may not directly cover the wide range of IT domains listed in PO1.

CO6: With PO1: Understanding inheritance and related concepts contributes to programming knowledge, though it may not directly encompass the broad range of IT domains in PO1.

CO7: With PO1 : Demonstrating OOPs concepts through programs is specific to programming and contributes to knowledge in programming languages, though it may not directly cover all IT domains in PO1.

Mapping of PO2 With All CO's with Justification :

CO1: With PO2 :A strong understanding of Object Oriented Concepts is fundamental to comprehending various dimensions of software application and project development.

CO2: With PO2 : Understanding the differences between Java and C++ is language-specific and may not be directly tied to grasping all dimensions of software application and project concepts.

CO3: With PO2 : Reading input is a basic programming skill but may not directly contribute to a comprehensive understanding of all dimensions of software application and project concepts.

CO4: With PO2 : Defining classes with access modifiers and creating objects contributes to a foundational understanding of software development but may not cover all dimensions of software applications and projects.

CO5: With PO2 : Writing real-world problems in Java is specific to programming and contributes to understanding software development, but it may not directly cover all dimensions of software applications and projects.

CO6: With PO2 : Understanding inheritance and related concepts is crucial for a comprehensive grasp of various dimensions within software application and project development.

CO7: With PO2 : Demonstrating OOPs concepts through programs is directly aligned with practical applications and contributes to a deep understanding of multiple dimensions within software application and project development.

Mapping of PO3 With All CO's with Justification :

CO1: With PO3 : Demonstrating Object Oriented Concepts with the use of ICT aligns with the goal of understanding computer subjects through practical applications.

CO2: With PO3 : Understanding the difference between Java and CPP is relevant to computer subjects, and demonstrating this knowledge through ICT usage contributes to a practical understanding.

CO3: With PO3 : Reading input using various methods is a programming skill that, when demonstrated through ICT, contributes to the practical understanding of computer subjects.

CO4: With PO3 : Defining classes with access modifiers and creating objects, when demonstrated using ICT, enhances the practical understanding of computer subjects, especially in programming.

CO5: With PO3 : Writing real-world problems in Java and demonstrating these programs with ICT aligns with the goal of understanding computer subjects through practical application.

CO6: With PO3 : Classifying inheritance and related concepts with ICT-based demonstrations enhances the practical understanding of computer subjects, combining theoretical knowledge with hands-on application.

CO7: With PO3 : Demonstrating the use of OOPs concepts through programs with the help of ICT aligns with the overall goal of understanding computer subjects through practical applications.

Mapping of PO4 With All CO's with Justification :

CO1: With PO4 : A strong understanding of Object Oriented Concepts is essential for developing in-house applications, forming the foundation for effective software design and implementation.

CO2: With PO4 : Understanding the difference between Java and CPP can be relevant to choosing the appropriate programming language for in-house applications, contributing to informed decision-making in project development.

CO3: WithPO4 :Reading input from different sources is a fundamental skill in programming, contributing to the ability to handle diverse input scenarios when developing in-house applications.

CO4: With PO4: Defining classes with various access modifiers and creating objects is crucial for structuring and implementing in-house applications in an organized and efficient manner.

CO5: With PO4: Writing real-world problems using Java is directly applicable to developing in-house applications, demonstrating the practical implementation of programming concepts in a project setting.

CO6: WithPO4 :Classifying inheritance and related concepts is vital for designing the architecture of in-house applications, ensuring efficient code organization and maintenance.

CO7: WithPO4 : Demonstrating OOPs concepts through programs is directly aligned with developing in-house applications, showcasing the practical application of theoretical knowledge in project scenarios.

Mapping of PO5 With All CO's with Justification :

CO1: WithPO5 :Interacting with IT experts during visits may provide insights into real-world applications of Object Oriented Concepts, enhancing understanding beyond theoretical knowledge.

CO2: WithPO5 :Interacting with IT experts during visits can offer opportunities to discuss and understand the practical implications of choosing between Java and CPP in real-world scenarios.

CO3: With PO5 : Interacting with IT experts during visits may not be directly tied to the skill of reading input from different ways, as this is more focused on programming skills.

CO4: With PO5 : Interacting with IT experts during visits may provide insights into the practical aspects of defining classes with various access modifiers and creating objects in real-world projects.

CO5: WithPO5 : Interacting with IT experts during visits may involve discussions on real-world problems and their solutions using Java, contributing to practical insights into project development.

CO6: With PO5 :Interacting with IT experts during visits may offer opportunities to discuss and understand the practical aspects of inheritance, binding, exception handling, and generic programming in real-world projects.

CO7: WithPO5 :Interacting with IT experts during visits may involve demonstrating OOPs concepts in practical scenarios, providing insights into their application in real-world projects.

Mapping of PO6 With All CO's with Justification :

CO1: With PO6 : The industrial internship provides practical exposure, allowing students to apply and deepen their understanding of Object Oriented Concepts in real-world IT projects.

CO2: WithPO6 :The industrial internship offers an opportunity to gain firsthand experience in the IT industry, allowing students to understand and potentially work with both Java and CPP, contributing to a practical understanding of their differences.

CO3: With PO6 : While the industrial internship may involve various tasks, including reading input from different sources, it may not be the primary focus, making it moderately related to the skill of reading input.

CO4: With PO6 : The industrial internship allows students to actively participate in defining classes with access modifiers and creating objects, contributing to their practical skills in software development.

CO5: With PO6: The industrial internship involves working on real-world problems, providing an excellent opportunity for students to apply their Java programming skills in practical scenarios.

CO6: With PO6 : The industrial internship allows students to classify inheritance and understand its applications, as well as gain practical experience in early and late binding, exception handling, and generic programming.

CO7: With PO6 : The industrial internship provides a platform for students to actively demonstrate the application of various OOPs concepts through real-world programming projects in an industry setting.

Mapping of PO7 With All CO's with Justification :

CO1: With PO7 :A strong understanding of Object Oriented Concepts is a key employability factor in the IT industry, aligning with the goal of making students employable.

CO2: With PO7 :Understanding the differences between Java and CPP is relevant to the employability of students, as it enables them to adapt to the technology demands of the IT industry.

CO3: With PO7 : Reading input from different sources is a fundamental skill, contributing to employability by enhancing adaptability to diverse data sources in the IT industry.

CO4: With PO7 :The ability to define classes with various access modifiers and create objects is a practical skill highly valued in the IT industry, enhancing employability.

CO5: With PO7 : Writing real-world problems using Java reflects practical application skills, making students more employable in the IT industry where problem-solving is crucial.

CO6: With PO7 : Understanding inheritance, early and late binding, exception handling, and generic programming contributes to students' employability by equipping them with advanced programming skills.

CO7: With PO7: Actively demonstrating the use of OOPs concepts through programs showcases practical proficiency, making students more employable in the IT industry.

SYLLABUS (CBCS) FOR S. Y. B. Sc. (Computer Science)
(w.e.f from Academic Year 2023-2024)
Class: S.Y. B. Sc.(Computer Science) (Semester- IV)

Subject: Computer Science

Paper Code: UCSCO242

Title of Paper: Software Engineering Principles and Techniques **Paper:** II

Credit: 3 (3 Lectures/Week)

No. of lectures: 45

Prerequisites:

- Basic knowledge of DBMS, RDBMS and pl/pgSql.
- Knowledge of HTML5, CSS, JAVASCRIPT and BOOTSTRAP.

Course Objective:

1. To learn system, its elements and system types.
2. To acquire the complete and thorough knowledge of software engineering principles and practices.
3. To understand various process models used in software engineering.
4. To know about the requirement engineering and structured analysis.
5. To develop skills of collecting, analyzing and evaluating end user requirement data.
6. To understand relevant methods and procedures to be used while doing their software project.
7. To build complete software documentation and applications with the help of concepts, principles and techniques learnt from this course.

Course Outcome:

- CO1:** Identify the type of system and its solution from the real-life problems or case studies.
- CO2:** Implement the complete and thorough knowledge of software engineering principles and practices.
- CO3:** Master over the complete process of Software Development Life Cycle
- CO4:** Explore all the Process Models of software engineering in detail.
- CO5:** Identify and Apply requirement engineering concepts for solving the real-life problems or case studies.
- CO6:** Identify and apply structured analysis and data flow analysis techniques.
- CO7:** Explore agility concept and XP process model in detail.

Unit	Title and Contents	No. of Lectures
Unit 1	System Concepts 1.1 System Definition 1.2 Characteristics of a System: Organization, Subsystem, Interaction, Interdependence, Integration, Central objective, Standards, Black box.	05

	<p>1.3 Elements of a system: Outputs, Inputs, Processor(s), Control, Feedback, Environment, Boundaries, Interface.</p> <p>1.4 Types of Systems: Physical & Abstract Systems, Open & Closed Systems, Computer-based Systems (MIS : Management Information System & DSS : Decision Support System)</p>	
Unit 2	<p>Software and Software Engineering</p> <p>2.1 The Nature of Software</p> <p>2.1.1 Defining Software</p> <p>2.1.2 Software Application Domains</p> <p>2.1.3 Legacy Software</p> <p>2.2 Software Engineering</p> <p>2.3 Software Engineering Practice</p> <p>2.3.1 The Essence of Practice</p> <p>2.3.2 General Principles</p>	05
Unit 3	<p>System Development Life Cycle (SDLC)</p> <p>3.1 Introduction</p> <p>3.2 Activities of SDLC</p> <p>3.2.1 Preliminary Investigation (Request Clarification, Feasibility Study, Request Approval)</p> <p>3.2.2 Determination of System Requirements</p> <p>3.2.3 Design of System</p> <p>3.2.4 Development of Software</p> <p>3.2.5 System Testing (Unit Testing, Integration testing, System Testing)</p> <p>3.2.6 System Implementation &Evaluation</p> <p>3.2.7 System Maintenance</p>	09
Unit 4	<p>Process Models</p> <p>4.1 A Generic Process Model</p> <p>4.2 Prescriptive Process Models</p> <p>4.2.1 The Waterfall Model</p> <p>4.2.2 Incremental Process Models</p> <p>4.2.3 Evolutionary Process Models</p> <p>4.2.3.1 Prototyping</p> <p>4.2.3.2 Spiral Model</p> <p>4.2.4 Concurrent Models</p>	09
Unit 5	<p>Requirements Engineering</p> <p>5.1 Introduction</p> <p>5.2 Requirements Engineering Tasks</p> <p>5.2.1 Inception</p> <p>5.2.2 Elicitation</p> <p>5.2.3 Elaboration</p>	

	<p>5.2.4 Negotiation</p> <p>5.2.5 Specification</p> <p>5.2.6 Validation</p> <p>5.2.7 Requirements Management</p> <p>5.3 Initiating the Requirements Engineering Process</p> <p>5.3.1 Identifying the Stakeholders</p> <p>5.3.2 Recognizing Multiple Viewpoints</p> <p>5.3.3 Working toward Collaboration</p> <p>5.4 Fact Finding Techniques(R3 : Chapter 3)</p> <p>5.4.1 Interview</p> <p>5.4.2 Questionnaire</p> <p>5.4.3 Record Review</p> <p>5.4.4 Observation</p>	08
Unit 6	<p>Structured Analysis and Agility</p> <p>6.1 Structured Analysis</p> <p>6.2 Physical Data Flow Diagram</p> <p>6.2.1 Notations</p> <p>6.2.2 Drawing a Context Diagram</p> <p>6.2.3 Exploding a Context diagram into Greater detail (1st level, 2nd Level DFD etc.)</p> <p>6.3 A Data Dictionary</p> <p>6.3.1 Concepts of Data Dictionary</p> <p>6.3.2 Importance of Dictionary</p> <p>6.3.3 Function of Data Dictionary</p> <p>6.4.4 Creation of Data Dictionary</p> <p>6.4 Introduction to Agile Process</p>	09

CO6	3	3	3	2	3	3	3
CO7	2	2	2	2	3	3	3

Weight: **1 - Partially related** **2 - Moderately Related** **3 - Strongly related**

Justification of Mapping of PO1 with All CO'S

CO1:PO1: This CO aligns with the application of computer fundamentals and problem-solving skills in real-life situations, which is a key aspect of PO1.

CO2:PO1: This CO is directly related to applying knowledge of software engineering principles, which includes mathematics and computer fundamentals as outlined in PO1.

CO3:PO1: The Software Development Life Cycle involves various stages where mathematical, statistical, and computer fundamentals are applied, aligning with the skills outlined in PO1.

CO4:PO1: While understanding process models involves a knowledge of software engineering, it may not directly require the application of mathematics, statistics, or computer fundamentals in every aspect.

CO5:PO1: Requirement engineering involves understanding and solving real-life problems, connecting it strongly with the application of mathematics, statistics, and computer fundamentals.

CO6:PO1: This CO aligns with the application of structured analysis techniques, which includes a solid understanding of mathematics and computer fundamentals as per PO1.

CO7:PO1: While agility concepts and XP process models are part of software engineering, they may not be directly tied to the application of mathematics, statistics, or computer fundamentals in all aspects.

Mapping of PO2 with All CO'S

CO1:PO2: Designing solutions for IT applications involves the identification of system types and solutions, aligning with the objective of designing solutions using the latest technologies as stated in PO2.

CO2:PO2: The implementation of solutions using various languages is a key aspect of software engineering principles, connecting strongly with the objective of implementing knowledge of software engineering in PO2.

CO3:PO2: Designing solutions involves a thorough understanding and mastery over the Software Development Life Cycle, linking closely with the objective of mastering the SDLC process in PO2.

CO4:PO2: While exploring process models is part of designing solutions, it may not be directly tied to the application of the latest technologies in all aspects.

CO5:PO2: Designing solutions involves identifying and applying requirement engineering concepts, aligning strongly with the objective of designing solutions for IT applications in PO2.

CO6: PO2: Designing solutions requires the application of structured analysis and data flow analysis techniques, connecting closely with the objective of designing solutions in PO2.

CO7: PO2: While exploring agility concepts and XP process models may be part of designing solutions, it may not be directly tied to the use of the latest technologies in all aspects.

Mapping of PO3 with All CO'S

CO1: PO3: The use of modern tools often involves identifying system types and solutions from real-life problems, connecting strongly with the objective of modern tool usage in PO3.

CO2: PO3: Modern tool usage involves implementing knowledge, but it may not be directly tied to the application of software engineering principles in all aspects.

CO3: PO3 :(Strongly Relates 3)The use of modern tools is closely tied to mastering the SDLC process, aligning with the objective of modern tool usage in PO3.

CO4: PO3 : (Moderately Related 2)While exploring process models may be part of modern tool usage, it may not be the primary focus of selecting and applying modern engineering and IT tools.

CO5: PO3 : Modern tool usage often involves applying requirement engineering concepts, aligning closely with the objective of modern tool usage in PO3.

CO6: PO3: The use of modern tools often includes applying structured analysis and data flow analysis techniques, connecting strongly with the objective of modern tool usage in PO3.

CO7: PO3 : Exploring agility concepts and XP process models may be part of modern tool usage, but it may not be the primary focus of selecting and applying modern engineering and IT tools.

Mapping of PO4 with All CO'S

CO1: PO4 : While understanding the impact of IT solutions on societal and environmental contexts is important, directly linking this to the identification of system types and solutions may be a moderate relationship.

CO2: PO4 : The implementation of software engineering principles may have indirect connections to understanding the impact of solutions on societal and environmental contexts.

CO3: PO4 : While the mastery of SDLC is crucial for effective software development, the direct connection to environmental and societal impact may be moderate.

CO4: PO4 : Exploring process models in software engineering may not directly align with understanding the impact on societal and environmental contexts, but there could be indirect connections.

CO5: PO4: Requirement engineering often involves understanding real-life problems, and connecting this with the impact on societal and environmental contexts is a strong relationship.

CO6: PO4 : While the application of analysis techniques is vital in software development, the direct link to environmental and societal impact may be moderate.

CO7: PO4 : Exploring agility concepts and XP process models may not have a direct link to environmental and societal impact, but there could be some indirect connections.

Mapping of PO5 with All CO'S

CO1: PO5: The application of ethical principles and commitment to professional ethics is closely related to identifying system types and solutions in real-life situations.

CO2: PO5 :Applying ethical principles is crucial in the implementation of software engineering principles and practices, forming a strong relationship.

CO3: PO5: Mastering SDLC involves ethical considerations at various stages, making the relationship strong.

CO4: PO5:Ethical considerations are important when exploring and selecting process models in software engineering, resulting in a strong relationship.

CO5: PO5: Requirement engineering often involves ethical considerations, forming a strong connection with the application of ethical principles.

CO6: PO5: Ethical principles apply throughout the software development process, including the application of analysis techniques, creating a strong relationship.

CO7: PO5: Understanding and exploring agility concepts and XP process models require ethical considerations, establishing a strong connection.

Mapping of PO6 with All CO'S

CO1: PO6: Functioning effectively in individual and team settings is closely tied to the ability to identify system types and solutions in real-life scenarios.

CO2: PO6: Effective individual and team work is essential in implementing software engineering principles and practices.

CO3: PO6: Mastering SDLC requires both individual effectiveness and the ability to work in teams and multidisciplinary settings.

CO4: PO6: Exploring process models involves collaboration within a team, establishing a strong relationship with the proficiency objective.

CO5: PO6: Applying requirement engineering concepts involves both individual and team efforts, forming a strong connection with the proficiency objective.

CO6: PO6 : Weightage 3 (Strongly Relates)Applying analysis techniques often requires collaboration within a team, aligning well with the proficiency objective.

CO7: PO6 : Weightage 3 (Strongly Relates)Exploring agility concepts and XP process models involves teamwork and effective collaboration, establishing a strong relationship with the proficiency objective.

Mapping of PO7 with All CO'S

CO1:PO7: Identifying opportunities and pursuing them to create value aligns with the skill of identifying system types and solutions in real-life scenarios.

CO2:PO7: Implementing software engineering principles and practices is crucial for pursuing opportunities and creating value, linking strongly with the proficiency objective.

CO3:PO7: Mastering SDLC is essential for developing the capacity to study and research independently, contributing to the skills needed for entrepreneurial endeavors.

CO4:PO7: Exploring process models is relevant to understanding and pursuing opportunities, contributing to innovation and entrepreneurial skills.

CO5:PO7: Applying requirement engineering concepts is crucial for identifying and solving real-life problems, aligning strongly with the innovation and entrepreneurial skills objective.

CO6:PO7: Applying analysis techniques is relevant to innovation and entrepreneurial skills, as it contributes to problem-solving and value creation.

CO7: PO7: Exploring agility concepts and XP process models is relevant to innovation and adaptability, supporting entrepreneurial skills.

SYLLABUS (CBCS) FOR S. Y. B. Sc. (Computer Science)
(w.e.f from Academic Year 2023-2024)

Class: S.Y. B. Sc.(Computer Science) (Semester- IV)

Subject: Computer Science

Paper Code: UCSCO244

Title of Paper: Practical on Software engineering with mini project **Paper:** IV (Practical)

Credit: 2 (3 Hour Practical/Week/batch)

No. of Practical: 12

Prerequisites:

- Basic knowledge of DBMS & RDBMS.
- Knowledge of HTML5, CSS, JavaScript and Bootstrap.

Course Objectives:

1. To understand Problem Definition and Scope.
2. To learn how to do Feasibility Study.
3. To identify various Data Requirements and Functional Requirements of particular problem.
4. To design different kinds of Front-end screens as per the customers requirement.
5. To implement normalization techniques to database.
6. To implement validation techniques.
7. To practically implement overall process of Software Development Life Cycle.

Course Outcome:

CO1. Identify problem definition and problem scope of real-life case studies.

CO2. Master over the various feasibility studies like technical feasibility, economical feasibility and operational feasibility.

CO3. Collect and Analyze data requirements and functional requirements.

CO4. Implementation of database normalization.

CO5. Implementation of various validation techniques with the help of JavaScript and Bootstrap.

CO6. Master over the front-end screen designing with the help of HTML5, CSS, Java Script and Bootstrap technology.

CO7. Build various real-life websites using HTML5, CSS, JavaScript and Bootstrap technology.

Sr. No.	Assignment Name
1.	Surfing of Internet for various websites related to student : Problem Identification, Problem definition, Problem Scope, Statement of Problem, Feasibility Study
2.	Gathering Data Requirements and Functional Requirements, ER Diagrams, Designing the Normalization of Database
3.	Implementation of various Input Types - Different kinds of Login Screen Designing by using HTML5, CSS and Bootstrap
4.	Implementation of various kinds of Navigation Menu's - Different kinds of User Side Screen Designing by using HTML5, CSS and Bootstrap

5.	Implementation of radio buttons and checkboxes - Different kinds of User Side Screen Designing by using HTML5, CSS and Bootstrap
6.	Master Entry Form web page - Different kinds of Admin Side Screen Designing by using HTML5, CSS and Bootstrap
7.	Transaction Entry Form web page - Different kinds of Admin Side Screen Designing by using HTML5, CSS and Bootstrap
8.	Implementation of File Upload, Date Picker , Audio , Video and YouTube videos in webpage wherever necessary
9.	Implementation of Carousel, Dropdown, List and Table in webpage wherever necessary
10.	Validation of all Designed screens by using HTML5, CSS , Bootstrap and JavaScript
11.	Responsiveness of webpages on various devices and Enhancement (Various effects from CSS and Bootstrap) of Designed screens by using CSS and Bootstrap
12.	Final demonstration and Report writing

Note : Industrial study visit to enhance student's soft skills and entrepreneurship development skills .

Mapping of this course with Programme Outcomes

Course Outcomes	Programme Outcomes (POs)						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

CO7	3	3	3	2	3	3	3

Weight: 1 - Partially related 2 - Moderately Related 3 - Strongly related

Justification of Mapping of PO1 with All CO'S

CO1: PO1: Identifying problem definitions and scopes in real-life case studies requires the application of mathematics, statistics, and computer fundamentals, aligning strongly with the proficiency objective.

CO2: PO1: While feasibility studies involve some application of computer knowledge, the direct link to mathematics, statistics, and computer fundamentals may be moderate.

CO3: PO1: Collecting and analyzing data requirements involve the application of statistics and computer fundamentals, strongly relating to the proficiency objective.

CO4: PO1: Database normalization involves applying mathematical and computational concepts, forming a strong relationship with the proficiency objective.

CO5: PO1: Implementing validation techniques with JavaScript and Bootstrap requires computer knowledge, aligning strongly with the proficiency objective.

CO6: PO1: Front-end screen designing involves applying computer fundamentals and technologies, strongly relating to the proficiency objective.

CO7:PO1: Weightage 3 (Strongly Relates) Building websites with HTML5, CSS, JavaScript, and Bootstrap technology directly applies computer knowledge, forming a strong relationship with the proficiency objective.

Justification of Mapping of PO2 with All CO'S

CO1:PO2: Weightage 3 (Strongly Relates) Designing solutions for IT applications involves understanding problem definitions and scopes, aligning strongly with the proficiency objective.

CO2:PO2: Weightage 3 (Strongly Relates) Mastering feasibility studies is essential in the design and development of IT solutions, forming a strong relationship with the proficiency objective.

CO3:PO2: Weightage 3 (Strongly Relates) Designing solutions requires a thorough understanding of data and functional requirements, strongly relating to the proficiency objective.

CO4:PO2: Weightage 3 (Strongly Relates) Implementing database normalization is a key aspect of developing IT solutions, aligning strongly with the proficiency objective.

CO5:PO2: Weightage 3 (Strongly Relates) Implementing validation techniques with JavaScript and Bootstrap is directly related to developing IT solutions using the latest technologies, forming a strong relationship.

CO6:PO2 : Weightage 3 (Strongly Relates) Mastering front-end screen designing involves using the latest technologies, strongly relating to the proficiency objective.

CO7:PO2: Weightage 3 (Strongly Relates) Building websites with the specified technologies directly applies to developing solutions for IT applications using the latest technologies, forming a strong relationship.

Justification of Mapping of PO3 with All CO'S

CO1:PO3: Weightage 3 (Strongly Relates) Creating, selecting, and applying modern tools to complex IT applications involves first identifying the problem definition and scope, aligning strongly with the proficiency objective.

CO2:PO3: Weightage 3 (Strongly Relates) The use of modern tools often requires a mastery of feasibility studies, forming a strong relationship with the proficiency objective.

CO3:PO3: Weightage 3 (Strongly Relates) Modern tools are frequently employed in the collection and analysis of data and functional requirements, strongly relating to the proficiency objective.

CO4:PO3: Weightage 3 (Strongly Relates) The use of modern tools in database normalization directly aligns with the proficiency objective.

CO5:PO3: Weightage 3 (Strongly Relates) Applying validation techniques with JavaScript and Bootstrap, as modern tools, strongly relates to the proficiency objective.

CO6:PO3: Weightage 3 (Strongly Relates) Mastering front-end screen designing with modern technologies is directly in line with the proficiency objective.

CO7:PO3: Weightage 3 (Strongly Relates) Building websites using modern technologies is an application of modern tools, forming a strong relationship with the proficiency objective.

Justification of Mapping of PO4 with All CO'S

CO1:PO4: Weightage 3 (Strongly Relates) Understanding the impact of IT analyst solutions in societal and environmental contexts requires first identifying the problem definition and scope, aligning strongly with the proficiency objective.

CO2:PO4: Weightage 3 (Strongly Relates) Assessing the feasibility of IT solutions includes considering their impact on society and the environment, forming a strong relationship with the proficiency objective.

CO3:PO4: Weightage 2 (Moderately Related) While the collection and analysis of requirements may not directly address societal and environmental impact, there may be some indirect connections.

CO4:PO4: Weightage 1 (Partially Related) The direct implementation of database normalization may not inherently relate to societal and environmental impact.

CO5:PO4: Weightage 2 (Moderately Related) The application of validation techniques may have some indirect implications for societal and environmental considerations.

CO6:PO4: Weightage 2 (Moderately Related) Front-end screen designing may indirectly influence the user experience and environmental considerations, forming a moderate relationship.

CO7:PO4: Weightage 2 (Moderately Related)

Building websites may indirectly impact societal and environmental aspects, particularly if the websites serve a specific purpose related to sustainability or societal well-being.

Justification of Mapping of PO1 with All CO'S

CO1:PO5: Weightage 3 (Strongly Relates) Applying ethical principles and professional responsibilities often starts with identifying and defining problems in real-life case studies, forming a strong relationship with the proficiency objective.

CO2: PO5: Weightage 3 (Strongly Relates) Committing to professional ethics and responsibilities is integral to mastering feasibility studies, aligning strongly with the proficiency objective.

CO3:PO5: Weightage 3 (Strongly Relates) Ethical considerations are crucial in the collection and analysis of data requirements and functional requirements, forming a strong relationship with the proficiency objective.

CO4:PO5: Weightage 2 (Moderately Related) While ethical principles are important in all aspects of IT, the direct link to database normalization may be more moderate.

CO5:PO5: Weightage 3 (Strongly Relates) Implementing validation techniques involves ethical considerations in ensuring data accuracy and security, aligning strongly with the proficiency objective.

CO6:PO5: Weightage 2 (Moderately Related) Ethical considerations may be indirectly involved in front-end design, making the relationship moderate.

CO7: PO5: Weightage 3 (Strongly Relates) Building websites with ethical considerations aligns strongly with the proficiency objective.

Justification of Mapping of PO6 with All CO'S

CO1: PO6: Weightage 3 (Strongly Relates) Functioning effectively as an individual and in a team requires the ability to identify and define problems in real-life case studies, forming a strong relationship with the proficiency objective.

CO2: PO6: Weightage 3 (Strongly Relates) Working in a team and mastering feasibility studies go hand in hand, aligning strongly with the proficiency objective.

CO3: PO6: Weightage 3 (Strongly Relates) Effective teamwork involves the collaborative collection and analysis of data and functional requirements, forming a strong relationship with the proficiency objective.

CO4: PO6: Weightage 2 (Moderately Related) While teamwork is crucial in IT projects, the direct link to database normalization may be more moderate.

CO5:PO6: Weightage 3 (Strongly Relates) Teamwork is essential in implementing validation techniques, aligning strongly with the proficiency objective.

CO6:PO6: Weightage 3 (Strongly Relates) Front-end screen designing often involves collaborative work in a team, strongly relating to the proficiency objective.

CO7: PO6: Weightage 3 (Strongly Relates)
Building websites requires effective teamwork, aligning strongly with the proficiency objective

Justification of Mapping of PO7 with All CO'S

CO1: PO7: Weightage 3 (Strongly Relates) Identifying opportunities and pursuing them to create value and wealth often starts with identifying and defining problems in real-life case studies, forming a strong relationship with the proficiency objective.

CO2:PO7: Weightage 3 (Strongly Relates) Developing innovation, employability, and entrepreneurial skills is closely tied to mastering feasibility studies, aligning strongly with the proficiency objective.

CO3:PO7: Weightage 3 (Strongly Relates) Innovation and entrepreneurial skills often involve the collection and analysis of data and functional requirements, forming a strong relationship with the proficiency objective.

CO4:PO7: Weightage 2 (Moderately Related) While entrepreneurship may involve IT projects, the direct link to database normalization may be more moderate.

CO5:PO7: Weightage 3 (Strongly Relates) Implementing validation techniques is relevant to creating value and wealth, strongly relating to the proficiency objective.

CO6:PO7: Weightage 3 (Strongly Relates) Front-end screen designing with modern technologies is crucial for innovation and entrepreneurial skills, forming a strong relationship with the proficiency objective.

CO7:PO7: Weightage 3 (Strongly Relates) Building real-life websites aligns with the goal of creating value and wealth, strongly relating to the proficiency objective.
